# Custom Built to Match Your Production Needs

## Ideal Workholding for Flat Ground Blanks

For the past 60 years TCI Precision Metals has been producing flat, close tolerance, Machine-Ready Blanks. In the process we became experts in the development and implementation of effective vacuum workholding solutions. This combined experience is now available to shops looking to increase their production efficiency.

- **Secure hard-to-hold parts** – thin, flat, irregular shapes
- **Reduce number of setups** – eliminate clamps and associated obstructions
- **Reduce cycle time, chip-to-chip** – a direct measure of increased efficiency

## Custom Designed and Built

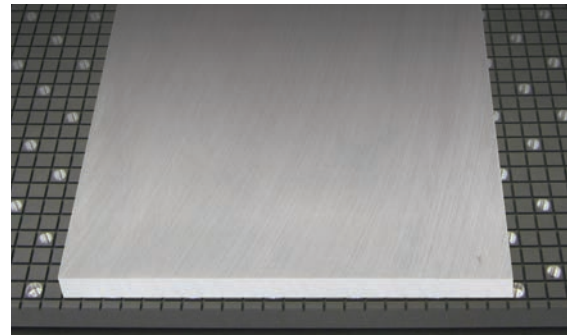

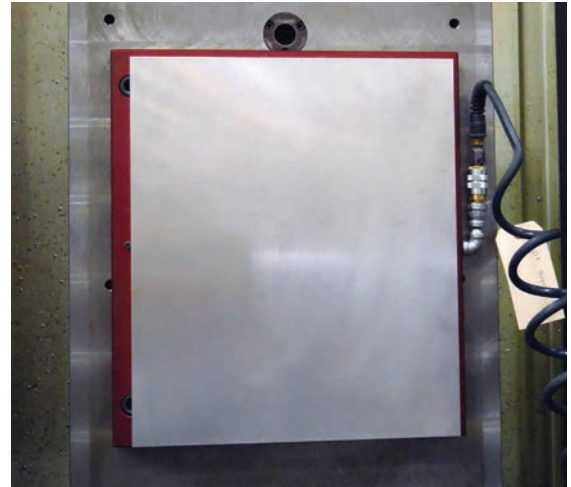

Each Vacuum Workholding Solution is designed and manufactured to match your specific requirements. Variable design components include:

- Chuck size
- Chuck shape
- Vacuum pressure
- Valve and control configuration

TCI Vacuum Workholding Solutions are designed and built to last with high quality components and hard anodized finishes for extended wear.

## Receive a Quote

Let us create a Vacuum Workholding Solution for you. A TCI Precision Metals application engineer will discuss your specialized application and create a solution to meet your needs.
